

Operon Functional Testing & Validation Report

Operon Functional Testing & Validation Report

Overview

This document presents a structured functional validation and quality assessment of the Operon Stage environment. The purpose of this assessment is to evaluate the system's current behaviour against expected business logic, workflow rules, and operational requirements.

The validation has been conducted through hands-on testing within the Stage environment, simulating real-world user interactions across different roles. The assessment focuses on verifying system reliability, workflow accuracy, data visibility, status transitions, and overall usability from both an operational and customer perspective.

This document captures:

- Observed system behaviour during testing
- Identified functional inconsistencies
- Workflow deviations
- UI/UX observations
- Recommendations for system improvement

The goal of this report is to provide a clear and transparent evaluation of the platform's functional health, highlight areas requiring refinement, and support continuous improvement prior to production-level deployment.

	Mod ule	Issue	Steps	Expected Result	Actual Result	Attach ment	St at us	Envir onm ent	De v	Rem arks
1	User Invit ation	When user clicks invitation acceptance link, it asked for password, but user doesn't	1. Login as Admin in Stage. 2. Navigate to Custom ers. 3. Click Invite	1. The invitation link should validate the token successfully.	• System displays an error message after clicking the invitation link.					

have a password when accepting an invitation. If user click on Create account error message appears instead of onboarding.	User. 4. Enter valid email and assign role. 5. Click Send Invitation. 6. Open invitation email. 7. Click Accept Invitation link. 8. Observe system behavior .	2. The system should redirect the invited user to a secure account setup page. 3. User should be able to: ◦ Set password ◦ Confirm account activation 4. After successful setup: ◦ User should be redirected to login page	• Account activation process does not proceed. • User cannot set password or access the platform. • No clear indication whether token expired or validation failed.						
--	--	--	---	--	--	--	--	--	--

			Account status should change to Active						
			5. Invitation token should remain valid until expiry period defined by system configuration.						
2	Authentication / Session Management	System displays “Token Failed” error when performing authenticated actions. This suggests session validation failure, token expiry	Cannot reproduce; occurs occasionally	Valid session token should allow request to complete successfully.	1. “Token Failed” error message displayed. 2. Action not completed. 3. User workflow				

		handling issue, or backend authentication mismatch.			w interrupted.					
3	Quotes → Activity Log	The Activity Log panel displays incorrect relative time values (e.g., “11 hours ago”) that do not match the actual time when the activity was performed. This results in inaccurate audit tracking and reduces reliability of the system activity history.	1. Login as Admin or Operator . 2. Navigate to Quotes. 3. Open any existing quote. 4. Perform an action (e.g., edit quote). 5. Open the Activity Log panel. 6. Observe the timestamp displayed for the	• Activity Log should display accurate relative time based on server/system time zone. • Timestamp should reflect the actual time difference between action performed and current time.			 	     		

			latest activity.						
4	Create Quote	During the quote creation and review journey, the system does not generate or display a Quote Number. In the Review modal, the field shows “N/A”, and there is no input field available for manual entry. A unique Quote ID is required for lifecycle tracking and revision management.	1. Navigate to Quotes → Create Quote. 2. Fill required details. 3. Click Review Quote. 4. Observe the Quote Number field.	• System should auto-generate a unique Quote Number upon draft creation OR • Provide a manual input field (based on business rule).					The quote number shows as N/A because it cannot be generated from Operation. Once the quote is created in Exit and a number

									is generated, it will be displayed in Operation. N/A was suggested by Ashiq, so we will keep it as is for now.	
5	Quote → Change Quote	When attempting to edit only the Items & Services section of a confirmed quote, the system triggers an error	1. Create a new quote. 2. Confirm the quote. 3. Re-open the quote.	• Items & Services should update successfully. • Quote should follow revision	• Error message appears. • Changes are not saved.					

		message and prevents the update. Other sections of the quote can be edited successfully. This breaks the revision workflow process.	4. Attempt to modify Items & Services only. 5. Save changes.	workflow and allow re-confirmation.						
6	Quotes → Cancel Quotes	After cancelling a quote, the Quote Status does not update immediately in the Quotes Dashboard. Even after performing a hard refresh, the status still shows the previous state for a noticeable period of time before	1. Login as Admin or Operator. 2. Navigate to Quotes Dashboard. 3. Select an existing quote. 4. Click Cancel Quote. 5. Confirm cancellation.	• After successful Cancel API response: ◦ UI should immediately reflect status as Cancelled. • Dashboard list should:	• Status remains in previous state after cancellation. • Hard refresh does not immediately update status. • After noticeable delay, status eventually updates

7	Operators → Edit Operator	When editing an Operator profile, clicking the Discard button does not close the modal window. User must manually refresh or close the browser tab.	1. Login to Stage 2. Navigate to Operators. 3. Select an existing Operator from the list. 4. Click Edit to open the Operator edit popup/modal. 5. Make any change in a field. 6. Click Discard. 7. Observe whether the popup	• Clicking Discard should: ◦ Close /dismiss the edit popup/modal immediately. ◦ Revert any unsaved changes made in the form. ◦ Return user to the Operator listing • Clicking Discard does not close the popup/modal. • User remains stuck in the edit modal state. • User must manually close the modal or refresh the page to exit.					

			closes and changes are discarded.	or previous screen.					
8	Operators → Delete Operator	When attempting to delete an Operator who is still in Invited / Pending Activation status (i.e., invitation sent but not yet accepted), the system throws an error message instead of completing the deletion process.	1. Login as Admin . 2. Navigate to Operators . 3. Identify an Operator with status Invited / Pending . 4. Click Delete . 5. Confirm deletion. 6. Observe system behavior.	- System should: - Successfully delete the invited user record OR - Display a clear validation message if deletion is restricted - No system error should be shown.					

			• UI should refresh and remove the invited user from the list.						
--	--	--	--	--	--	--	--	--	--

9	Customer → Edit Customer Clicking Edit Customer opens a modal dialog, but the modal is not displayed properly (layout/rendering issue). The dialog appears broken or incorrectly positioned, making it difficult or impossible to interact with fields and actions. OBSERVATION Cannot reproduce; occurs occasionally	1. Login as Admin. 2. Navigate to the Customer details (where “Edit Customer” is available). 3. Click Edit Customer. 4. Observe the modal dialog rendering and behavior.	1. Modal should open centered (or per design), fully visible within the viewport. 2. All modal content should be readable and accessible: ◦ Input fields visible and aligned ◦ Buttons (Save / Discard / Close) visible	1. Modal dialog is not displayed correctly (UI rendering/layout issue). 2. Content appears broken/misaligned or partially hidden, impacting usability. 3. User cannot reliably complete the edit action.				It happens sometimes; after a manual refresh, the modal appears.	
---	--	---	--	--	---	---	---	---	--

			e and clicka ble ◦ Back groun d scroll locke d (if requir ed by desig n)						
10	Cust omer → Edit Cust omer	In the Edit Customer screen, updates to Name and Phone save correctly and are visible immediately after saving. However, updating the Email field behaves inconsistently: • System allows editing Email	1. Login as Admin. 2. Navigate to Custom er page. 3. Click Edit Custom er. 4. Update Email to a new valid email address. 5. Click Save / Update. 6. Confirm the success messag	1. If Email is editable : ◦ The updat ed email shoul d be persi sted and displa yed every wher e consi stentl y after save.	1. Email field can be edited and saved. 2. System shows a successf ul update messag e. 3. After save and refresh, Email remains unchang ed / previous value is still			o Op eron	@ Ka wsa r Ah ma d

• System displays a success confirmation message • But the updated email is not reflected in the UI after saving	e is shown. 7. Refresh the page or re-open the profile screen. 8. Observe the displayed Email value.	◦ System should validate the uniqueness of email address at the time of registration and enforce any business rules (e.g., email cannot be used by another user). 2. If Email is not intended to be editable: ◦ Email field should be read-only	displayed. 4. Only Name and Phone should reflect the updates correctly.
---	---	---	---

				only/ disabl ed, and syste m shoul d not show a succ ess mess age implyi ng it chan ged.						
1 1	Jobs → Create Job → Link Quote drop down	When creating a new Job and selecting a quote to link, the system displays Cancelled quotes in the Quote selection dropdown.	1. Login as Admin / Operator. 2. Navigate to Quotes. 3. Cancel an existing quote. 4. Navigate to Jobs → Create Job. 5. In the job	• Only quotes with valid statuses should appear (e.g., Accepted). • Canceled quotes must be excluded from dropdo	• Canceled quotes appear in the dropdown. • User can attempt to select a canceled quote when creating a job.					

			creation form, locate the Link Quote dropdown field. 6. Open the dropdown list. 7. Observe whether cancelled quotes are available for selection.	wn results. • System should enforce status-based filtering before displaying eligible quotes. • If a quote becomes Cancelled after being linked, system should prevent further workflow actions.					
1 2	Jobs → Job Details → Quotes & Billing	Within a Job, when attempting to delete/remove a linked quote:	1. Login as Admin/Operator in Stage. 2. Open an existing Job	• When “Remove/Delete quote from job” is executed • Cancelled quote: ◦ Success message displayed.					

(Link ed Quot es) / Remo ve Quot e	• If the linked quote is Active, the removal works as expected (quote disappears from the Job list). • If the linked quote is Cancelled, the system displays a success message, however the quote still appears in the Job afterwards	(Job Details page). 3. Go to Quotes & Billing (or the section listing linked quotes). 4. Locate a linked quote with Cancelled status. 5. Click Delete/Remove (trash icon / remove action). 6. Confirm the deletion if prompted. 7. Observe the success confirmation	successfully: ◦ Quote should be unlinked and no longer appear in the Job view. ◦ UI should refresh immediately and reflect removal. • If Cancelled quotes cannot be removed due to	◦ Quote remains visible /linked in the Job list. • Active quote: ◦ Successfully removed and disappears from list (works correctly).				
---	---	--	---	--	--	--	--	--

			message. 8. Check the linked quotes list again (and refresh page if needed).	business rules: System should block the action with a clear validation message (not show success).						
1 3	Jobs → Milestones → Delete Milestone	When attempting to delete a milestone from within a job, the system displays an error popup, and the milestone is not removed.	1. Login as Admin in Stage. 2. Navigate to Jobs. 3. Open an existing Job (Job Details). 4. Go to Milestones section/tab.	- System should delete the milestone successfully. - Milestone should disappear immediately from	- Error popup appears when attempting to delete. - Milestone remains in the list and is not removed.					

- | | | |
|---|--|--|
| 5. Select an existing milestone. | the milestone list. | • User cannot complete milestone deletion. |
| 6. Click Delete (trash icon). | • If milestone cannot be deleted | |
| 7. Confirm deletion if a confirmation dialog appears. | due to dependency rules (e.g., invoice d/paid/li | |
| 8. Observe the system response. | nked tasks): <ul style="list-style-type: none">◦ System should show a clear validation message explaining why deletion is blocked. | |

				◦ UI should not show generic error popup.						
1 4	Contractors → Edit Contractor	When editing an existing contractor, the form fields are empty instead of being pre-filled with previously saved data. This creates risk of overwriting existing information and causes confusion to users.	1. Login as Admin. 2. Navigate to Contractors. 3. Select an existing contract or. 4. Click Edit. 5. Observe form fields.	• Edit form should load with previously saved contract or data. • All editable fields should display current values.	• Fields appear empty. • Existing data not visible in form.					
1 5	Contractor Onboarding → Account	When activating a newly invited Contractor profile:	1. Login as Admin. 2. Invite new Contractor.	1. After password setup: ◦ Contractor account	1. Login fails. 2. System displays: "Invalid username or					

Activation → Login	1. Contractor receives invitation link.	3. Open invitation email.	unt statu s should change to Active.	passwor d”
	2. Contractor sets a new password successfully.	4. Click activation link.	should chan ge to Activ e.	3. Contractor or cannot access system despite activation.
	3. System confirms password setup.	5. Set new password.	o Credential s should be persisted in authentication system.	
	4. Contractor attempts to log in using:	6. Confirm activation		
	o Email (username)	7. Navigate to login page.		
	o Newly created password	8. Enter:		
The system returns:	o Username (email)	2. Contractor should be able to login immediately using newly set password.		
	o Newly created password	3. System should redirect		
	9. Click Login.			

		“Invalid username or password” Despite successful activation and password setup, login fails		to Contractor dashboard upon successful login.					
16	Customer → Select Customer → Payment History → Download Invoice	When attempting to download an invoice using the Download Invoice option, the download does not occur. The system does not provide the invoice file (PDF or expected format), and the action	1. Login to Stage. 2. Navigate to Customer module. 3. Open an existing Customer. 4. Navigate to Payment History 5. Click Download (Download	1. Clicking Download Invoice should: ◦ Generate (if required) and return the invoice document (commonly PDF).	1. Download does not start / no file is provided. 2. Invoice cannot be downloaded. 3. User is blocked from obtaining invoice document.				

appears to fail silently

Invoice button/icon).

6. Observe browser behavior:

- file download prompt
- download tray
- new tab opening
- any error message

- Trigger a browser download or open the file in a new tab (per design).
- Provide a user-friendly message if generation takes time (e.g., “Preparing invoice...”).

2. File should download successfully

				fully and be readabl e.					
1 7	New User Invit ation → Acce pt Invit ation → Sign Up	When accepting an invitation, the user is presented with an activation/sign-up form that includes a pre-filled Phone Number. After the user enters a password and clicks Sign Up, the phone number field value changes automatically without user input.	1. Open the invitation email and click Accept Invitation link. 2. Verify the activation form loads with user details (including phone number). 3. Observe and note the phone number currently displayed. 4. Enter a valid password.	1. Phone number should remain unchanged unless the user manually edits it. 2. On submission: ◦ The same phone number displayed should be sent and persisted.	1. Phone number value changes automatically after clicking Sign Up. 2. Change occurs without user input. 3. Resulting value may become incorrect or inconsistent with the originally pre-filled value.				

			• Set Password field • Confirm Password field • Accept & Continue button • After password setup → redirect to Onboarding Screen: • Profile setup (Name, Phone, Role confirmation) • Permissions summary (what access they have) • Optional first-time walkthrough • Automatically activate account after password creation (no need to sign up again). This removes unnecessary manual steps and improves UX clarity		
2	Dashboard – Missing Timeframe Filtering	Dashboard metrics currently display static aggregated data only. There are no timeframe filters such as “Today”, “This Week”, “This Month”, or custom date range selection. This limits management-level reporting and quick decision-making. High impact improvement for Admins and Operators.		Implement Timeframe Filtering for Dashboard Metrics: • Add a timeframe selector dropdown at top-right of dashboard: • Today • Yesterday • This Week • Last Week • This Month • Last Month • Custom Date Range (Calendar picker)	

			• All dashboard widgets/cards should dynamically refresh based on selected timeframe.	
3	Dashboard Cards – Inconsistent Click Behaviour	On the dashboard, some summary cards (e.g., Jobs in Progress, Quotes Pending Approval) are clickable and redirect to related pages, while others (e.g., Financial Overview cards such as Total Due, Total Paid, Invoice Count) are not clickable. There is no visual distinction between interactive and non-interactive cards, leading to user confusion.		Standardize Card Interaction Behaviour: • Option 1: Make all dashboard metric cards clickable and redirect to filtered list views (e.g., Total Due → Billing page filtered by unpaid invoices). • Option 2: If certain cards are informational only, clearly indicate non-clickable state using: ◦ No hover effect ◦ Default cursor instead of pointer ◦ Reduced elevation/shadow • Add consistent hover states for clickable cards (pointer cursor + subtle shadow + background highlight). • Consider adding small “View Details →” text inside clickable cards for clarity.
4	Dashboard – Missing Performance	Dashboard currently displays summary metrics only (counts and totals). It does	Implement Analytical KPIs & Performance Indicators:	

	ce Indicators not provide analytical insights or performance indicators such as job completion rate, booking approval time, revenue comparison trends, or outstanding payment aging. This limits strategic decision-making and management visibility.	Introduce a KPI section above or within Financial Overview including: • Job Completion Rate (%) – Completed Jobs ÷ Total Jobs • Average Booking Approval Time – Time between booking request and approval • Revenue Comparison – This Month vs Last Month (with % increase/decrease indicator) • Outstanding Payments Aging Report – 0–30 days, 31–60 days, 60+ days buckets • Visual indicators (↑ ↓ arrows, green/red trend markers) This transforms the dashboard from summary-based to insight-driven.	
5	Dashboard – No Widget Customization The dashboard layout is fixed. Users cannot rearrange widgets, hide irrelevant sections, or personalize their dashboard view based on role or preference.	Implement Dashboard Personalization Features: • Enable drag-and-drop widget rearrangement. • Allow users to hide/show widgets via a “Customize Dashboard” option. • Provide role-based default layouts (e.g.,	

			Admin = Financial KPIs, Operator = Job Workflow). • Save user-specific layout preferences in profile settings. • Allow widget size adjustment (small/medium/large). This aligns the platform with modern SaaS dashboard standards and improves user engagement.	
6	Clickable Email Integration (Quick Communication)	In the Quote Details page, the customer email is displayed under Customer Information. However, clicking the email does not trigger any action. There is no direct way for an Operator to send an email from within the system	 Implement Click-to-Email Functionality with Integrated Communication Option: • Make email address clickable. • On click, provide two options: ◦ Open default mail client ◦ Open in-app “Send Email” modal • In-app email modal should include: ◦ To (auto-filled, editable) ◦ CC/BCC options ◦ Subject (auto-generated with Quote ID)	

			◦ Rich text message editor ◦ Attachment support ◦ Send button • Log sent emails in Activity Log for traceability. • Extend functionality to Operators, Contractors, and Customers across the system.		
7	Discard Edit Behaviour – Quote Edit Form	When a user clicks Discard while editing/updating a quote, the system clears all input fields and displays an empty form. This creates confusion and may give the impression that the quote data has been lost. It disrupts user flow and increases the risk of accidental data loss.		Improve Discard Action Behaviour: • When user clicks Discard, redirect to: ◦ The selected quote details page (preferred), OR ◦ The Quotes main listing page. • Alternatively, restore original quote data instead of clearing fields. • Change confirmation modal for discard: <i>“Are you sure you want to discard changes? Unsaved changes will be lost.”</i> [Cancel] [Discard Changes] • Maintain consistent behaviour across Edit Quote, Edit Job, and other edit forms.	

8	Job Creation – Discard Action Does Not Redirect	When creating a new Job, if the user clicks Discard, the system clears all entered data but remains on the Job Creation page with an empty form. This behaviour can confuse users, as it appears like they are still in “create mode” instead of exiting the process.		Improve Discard Behaviour in Job Creation Flow: • When user clicks Discard, redirect them to the Jobs main/list page instead of clearing the form and staying on the same screen. • Add a confirmation modal before discarding: • Title: “Discard job creation?” • Message: “All unsaved job details will be lost.” • Buttons: Cancel / Discard & Exit	
9
