

	Module	Issue	Steps	Actual Result	Expected Result	Attachment	Status	Environment	Reporter	Dev	Remarks
1	Labour Hire → Labour Profile	While creating a Labour Profile in Labour Hire Center → Create Profile, the Session Start Date field allows selecting dates in the past (before the current date / profile creation date).	1. Navigate to Labour Hire Center 2. Click Labour Profile tab 3. Click Create Profile 4. Enter required Profile Information 5. Expand Profile Session section 6. Click on Start Date field 7. From the date picker,	The system allows selecting past dates in the Session Start Date field without any validation error. No restriction or warning is displayed.	The system should prevent selection of dates earlier than the current date (Profile creation date). • Past dates should be disabled in the date picker - OR • A validation error should appear on Save		Open...	Exsited	@Anoma Rathnayaka		

			select a date before today							
2	Labour Hire → Create / Edit Labour	When creating or editing a Labour record, selecting an address from the auto-complete dropdown does not populate the Road Number into the corresponding Address Line field. The system provides address suggestions, but after selection: • Street name is	1. Navigate to Labour Hire Center Create Labour 2. Click Create Labour 3. Scroll to Contact Information → Address section 4. Type a full address including road number (e.g., 25 Collins Street, Melbourne) 5. Select address from auto-complete	The Road Number (e.g., 25) is not populated in Address Line fields after selecting from auto-complete. Address becomes incomplete.	When selecting an address from auto-complete: • Road number should populate correctly into Address Line 1 • Full structured address should be saved • No manual re-entry should be required			Exsited	@An oma Rathn ayak a	

		populated	suggestion							
		• Other details may populate • Road number is missing This causes incomplete address data to be saved.	6. Observe Address Line fields							
3	Labour Hire → Create / Edit Labour-> Contact Information → Address section	When selecting an address that contains a Unit / Apartment number, the system does not populate the unit number into the address fields.	1. Navigate to Labour Hire Center Create Labour 2. Click Create Labour 3. Go to Contact Information → Address section 4. Type an address containing a	Unit number is not populated into any Address Line field.	Unit number should automatically populate into: • Address Line 1 (preferred) , or • A dedicated Unit field (if supported) Full structured address must be preserved.			Exs ited	@An oma Rathn ayak a	

		Example: (e.g. Unit 2/53 0'Conno r Road, Knoxfie 1d VIC 3180) After selecting from auto-complete: • Street name is populated • Unit number is missing This results in incomplete or incorrect address storage.	Unit number 5. Select address from auto-complete 6. Observe Address Line fields								
4	Labour Hire → Create / Edit Labour-> Contact	While creating or editing a Labour record, the system	1. Navigate to Labour Hire Center	The system successfully saves the Labour record	If any address-related field is populated: • Address Line 1		op...	Exs ited	@An oma Rathn ayak a		

[illegible]

		Line 1 can lead to: • Incomplete addresses records • Data inconsistency • Issues in billing, delivery, and compliance documentation								
5	Labour Hire → Labour List View	Sorting (ascending/descending) does not work for “Created By” and “Created On” columns in Labour list view	1. Navigate to Labour Hire Center 2. Open Labour tab 3. Ensure there are multiple Labour records with different	1. Clicking Create On does not change the record order 2. Clicking Create By does not	1. Clicking Create On should sort records by created date/time (ascending/descending) 2. Clicking Create By should sort records alphabetically by			Exs ited	@An oma Rathn ayak a	

			Created On values (and/or different Created By values, if possible) 4. Click the Created On column header to sort 5. Click again to toggle ascending/descending 6. Repeat steps 4–5 for Created By column header	change the record order 3. Ascending/descending toggle behaviour is not applied	creator (ascending/descending) 3. Sorting should be consistent with other sortable columns and list view expectations					
6	Labour Hire → Create / Edit Labour	Phone Number field validation is	1. Navigate to Labour Hire Center	1. System blocks some symbols	As per the Labour Configuration in H015:		OP...	Exsited	@Anoma Rathnayaka	

inconsistent.

The system correctly shows an “Invalid Phone” error when entering certain symbols such as:

! @ \$ %
^ &

However, the system allows the record to be created when the Phone Number contains:

. # *
, ()

These characters are accepted without

- 2. Click **Create Labour** (or Edit existing Labour)
- 3. Expand **Contact Information**
- 4. Enter special characters in **Phone Number** field (e.g., .# *, ())
- 5. Click **Save**
- 6. Open Labour Details page

(!@\$%
^&)

2. System allows . # *
, ()

3. Labour record is successfully created with these characters in Phone Number

- phone_number → VALIDATION_STRING_20
- Expected behaviour should restrict invalid characters
- Phone numbers should allow only numeric values

		validation errors.									
7	Labour Hire → Create Labour & Edit Labour Deatils	When creating a new Labour record, if the user enters data and clicks Cancel, the system navigates away without: • Showing a warning message • Prompting confirmation • Asking to discard unsaved changes There is no	1. Navigate to Labour Hire Center 2. Click Create Labour 3. Enter data in required fields (e.g., Name, Email, etc.) 4. Click Cancel 5. Observe system behaviour	1. System navigates away immediately 2. No warning message displayed 3. No confirmation popup 4. No option to “Discard” or “Stay”	If user has entered any data and clicks Cancel, system should: • Display confirmation dialog • Show message like: "You have unsaved changes. Are you sure you want to discard them?" • Provide two options: ◦ Discard ◦ Stay on Page			Exs ited	@An oma Rathn ayak a		

		confirmati on dialog such as: "You have unsaved changes . Are you sure you want to discard them?" This may result in accidental data loss.			The user should not lose data accidentally.						
8	Labour Hire → Create / Edit Labour	As per H015 requireme nt, the Name field allows up to 100 character s. When entering 99 character s without spaces, the	1. Navigat e to Labour Hire Center 2. Click Create Labour 3. Enter a Name with 99 continuo us characte rs (no spaces) 4. Save the Labour	1. Name field allows 99 charact ers (correct) 2. Long continuo us string breaks UI alignme nt 3. Text overflo	Since the system allows up to 100 characters: • The UI must handle long continuous strings properly • Text should wrap correctly without		op...	Exs ited	@An oma Rathn ayak a		

Improvement & Suggestions

	Module	Feature	Attachment	Improvements & Suggestions	Remarks
1	Labour Hire Management	Labour – Create / Edit Form		Add real-time field validation with inline helper messages (e.g., email format, phone format, required fields). Instead of showing validation only after Save, provide instant feedback.	
2	Labour Hire Management	Labour List View		Add advanced filters (Status, Profile, Created Date range, Country, Active/Inactive toggle). Currently sorting exists, but advanced filtering would improve usability.	
3	Labour Hire Management	Labour List View		Add Export to Excel / CSV option for labour list.	
4	Labour Hire Management	Profile Session		Add overlapping session detection warning. If two sessions overlap in date range, show a warning before saving.	
5	Labour Hire Management	Booking (Order Integration)		Show real-time availability indicator when selecting labour in booking screen (Available / Partially Available / Fully Booked).	
6	Labour Hire Management	Booking Calculation		Show pricing breakdown tooltip (How total was calculated). Example: 5 days × \$50/hr × 8 hrs/day.	

7	Labour Hire Management	Contact Information		Add phone format masking based on selected country code.	
8	Labour Hire Management	System Notifications		Add alert when Max Booking Limit is exceeded or close to limit (e.g., 90%).	
9	Labour Hire Management	UI/UX		Add collapsible sections with auto-save draft functionality. If user navigates away, data should not be lost.	
10	Labour Hire Management	Labour – Email Field		Add unique email validation for Labour records. System should prevent creating multiple Labour profiles with the same Email Address. If duplicate is entered, show clear message: “Email already exists for another Labour record.”	
11	Labour Hire Management	Labour Profile – Session Availability		Add a dedicated “Edit Availability” button inside each Session’s Availability section. Currently, availability can only be modified after clicking the main “Edit Profile” button. Instead, allow direct editing from the session view	
12	Labour Hire Management	Profile Session – Availability		Add real-time validation for overlapping availability time ranges within the Availability modal itself. System should detect overlap immediately when user enters Start/End times and show inline error	

				before clicking main Profile Save.	
1 3	Labour Hire Management	Profile Session – Availability		Show validation message if no availability is enabled for the session. Instead of disabling Save button silently, display clear message: “At least one availability day and time slot must be enabled for this session.”
