

Standardized Test Case Report Template for QA Teams

Test Case Report Template

Overview

This document provides a standardized Test Case Report Template used to design, document, and execute test cases during software testing activities.

The template helps Quality Assurance (QA) engineers, testers, developers, and product teams record test scenarios and validate system functionality in a structured and consistent format.

By using a unified test case structure, teams can ensure:

- Consistent test documentation
- Traceability of testing activities
- Clear validation of system behavior
- Efficient collaboration between QA and development teams

This template is suitable for use in manual testing workflows, system testing, user acceptance testing (UAT), regression testing, and functional testing.

It captures key information including:

- Test scenario and test case identification
- Preconditions and test steps
- Expected results
- Test execution results
- Test status and evidence

The template can be used across multiple environments including:

- Development
- Stage
- UAT
- Production

This reusable template supports industry QA documentation standards and can be integrated with test management tools such as Jira, TestRail, Azure DevOps, or other QA tracking systems.

◆ Test Case Summary Information

Field	Details
Project Name	
Application / System	
Module	
Test Cycle	
Test Environment	Dev / Stage / UAT / Production
Prepared By	Anoma Rathnayaka
Date	
Version	

◆ Test Case Report Table

Test Case ID	Module	Test Scenario	Preconditions	Test Steps	Test Data	Expected Result	Actual Result	Status	Priority	Severity	Environment	Tester	Evidence	Remarks
TC-001	Login	Verify user login with valid credentials	User account exists	1. Open login page 2. Enter valid email	Valid user credentials	User successfully logs in and redirected to dash		Pass / Fail	High	High	Stage	Anoma Rathnayaka	Screenshot	

				3. Enter password		board							
				4. Click login									
TC-002	Login	Verify login with invalid password	User account exists	1. Open login page 2. Enter valid email 3. Enter incorrect password 4. Click login	Invalid password	Error message should appear		Pass / Fail	Medium	Medium	Stage	Anomathayaka	Screenshot

◆ Test Execution Summary

Metric	Result
Total Test Cases	
Passed	

Failed	
Blocked	
Not Executed	

◆ Test Status Definition

Status	Description
Pass	Test case executed successfully and expected result matched
Fail	Expected result did not match actual result
Blocked	Test case could not be executed due to dependency
Not Executed	Test case not executed yet

◆ Priority Definition

Priority	Description
High	Critical functionality
Medium	Important but not system breaking
Low	Minor functionality

◆ Evidence / Attachments

Each executed test case should include supporting evidence such as:

- Screenshots
- Screen recordings
- Console logs
- API responses

- Database validation

Example:

Test Case	Evidence
TC-001	Screenshot of successful login
TC-002	Screenshot of error message

◆ Test Environment Details

Environment	Details
Application Version	Version number
Browser	Chrome / Edge / Firefox
Operating System	Windows / macOS
Database	MySQL / PostgreSQL

◆ QA Notes

Provide any additional observations or recommendations discovered during testing.

Example:

Some validation messages appear inconsistent across browsers and may require UI standardization.

◆ Test Execution Workflow

1. Define test scenarios
2. Create test cases based on requirements
3. Prepare test data
4. Execute test cases in selected environment
5. Record results and evidence
6. Log defects if expected results do not match

7. Perform retesting after fixes
